                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4
                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides proteins (AAV27201-245) from Neisseria meningitidis (strains A and B) and nucleic acid sequences (AAX99123-167) encoding the proteins. Compositions comprising the protein, nucleic acid or antibody specific to the protein are useful as pharmaceuticals, e.g. a vaccine composition or a diagnostic composition. The composition is also useful for treating or preventing an infection due to Neisserial bacteria, especially Neisseria meningitidis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       58 YLEPVQRTAVVLSFRSDKEGTGEKEGTED-SNWAVYFDEKRVLKAGAITLKAGDNLKIKQ 116

The present invention relates to the isolation of novel Neisseria meningitidis mutant polypeptides of the surface antigen Nhh AMAUGELAAUGGIBS). The modified or mutant Nhhh Polypeptides are characterised by deletions of non-conserved amino acids, particularly the deletion of variable regions. The deletion mutants are useful in diagnostics, therapeutic and prophylactic vaccines against a broader spectrum of N. meningitidis, and in designing and/or screening of medicaments. The mutant proteins when used as a vaccine can effectively immunise against a broader spectrum of N. meningitidis strains than would be expected from a corresponding wild-type surface antigen. The present sequence representing the wild type surface antigen from N. meningitidis strain protein is 1 of 10 Nhh polypeptide sequences (AAU06171-AAU06180) from 10 different N. meningitidis strains given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              YLEPVQRTAVVLSFRSDKEGTGEKEGTED-SNWAVYFDEKRVLKAGAITLKAGDNLKIKQ 116

Mol. Surface-exposed protein of Rickettsia rickettsii.";
Mol. Microbiol. 3:1579-1586(1989).
I- FUNCTION: THE 120 kDa SURFACE-EXPOSED PROTEIN IS A MAJOR
STRUCTURAL PROTEIN WICH MAY PLAY A ROLE AS A RICKETTSIAL
VIRULENCE FACTOR AND/OR IMMINOGEN DURING INFECTION.
I-SUBCELLIGHAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A LAYER WITH HEXAGONAL. SYMMETRY.
I-SIMILARITY: BELONGS TO THE RICKETTSIAE OMPA/OMPB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gilmore R.D. Jr., Cieplak W. Jr., Policastro P.F., Hackstadt T.; "The 120 kilodalton outer membrane protein (rOmp B) of Rickettsia rickettsii is encoded by an unusually long open reading frame: evidence for protein processing from a large precursor."; Mol. Microbiol. 5:2361-2370(1991).

"Cloning, expression and sequence analysis of the gene encoding the 120 kb surface-exposed protein of Rickettsia rickettsii.";
Mol. Microbiol. 3:1579-1586(1989).
-!- FUNCTION: MAJOR STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS RICKETTSIAL VIRULENCE FACTOR AND/OR IMMUNGEN DURING INFECTION.
-!- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A S-LAYER WITH HEXAGONAL SYMMETRY.
-!- MISCELLANBOUS: ITS C-TERMINUS POTENTIALLY MAY BEAR THE EPITOPES
                                                                                                                                                                                                                                                                                           CONFERRING ANTIGENICITY TO THE PROTEIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          958 YGSTGTAGADSTLIAGYGSTQTSGS------DSSLTAGYGSTQTAREGSDVT 1003
CRYSTALIZATION PROTEINS ENABLE BACTERIA TO NUCLEATE
CRYSTALIZATION IN SUPERCOOLED WATER.
-!- SUBCELDULAR LOCATION: OUTER membrane (By similarity).
-!- DOMAIN: CONTAINS 153 IMPERFECT REPEATS OF THE CONSENSIS
OCTAPEPTIDE A-G-Y-G-S-T-L-T; FURTHER ON A 16-RESIDUE AND A
REGIONAL 48-RESIDUE PRIODICITY IS SUPERIMPOSED.
-!- MISCELLANBOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICH
NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.
-!- SIMILARITY: BELONGS TO THE BACTERIAL ICE NUCLEATION PROTEIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        735 GSTQTSGSDSSLTAGYGSTQTARKGSDVTAGYGSTGTAGADSTLIAGYGSTQTSGSDSSL
